NODE RED INPUT AND OUPUT:

The screenshot displays the IBM Watson IoT Platform dashboard. The top navigation bar includes 'Browse', 'Action', 'Device Types', and 'Interfaces'. The main content area shows the 'Recent Events' tab for a device with ID 12345. A table lists the following events:

Event	Value	Format	Last Received
event_1	{\"temperature\":20,\"humidity\":12}	json	a few seconds ago
event_1	{\"temperature\":26,\"humidity\":4}	json	a few seconds ago
event_1	{\"temperature\":50,\"humidity\":75}	json	a few seconds ago
event_1	{\"temperature\":66,\"humidity\":42}	json	a few seconds ago
event_1	{\"temperature\":3,\"humidity\":7}	json	a few seconds ago

At the bottom of the dashboard, it indicates '1 Simulation running'.

The screenshot shows the Node-RED interface. The main workspace displays a flow diagram with the following components:

- Input:** An 'IBM IoT' node (connected) feeds into a 'msg.payload' node.
- Processing:** The 'msg.payload' node connects to two function nodes: 'level' and 'value'.
- Output:** The 'level' function node connects to a 'humidity level' gauge, and the 'value' function node connects to a 'temperature value' gauge.

The right-hand 'debug' console shows the following log entries:

```
iot-2/type/NodeMCUID/12345/ev/event_1/fmt/json :  
msg.payload : Object  
  { temperature: 33, humidity: 43 }
